

IN THE UNITED STATES DISTRICT COURT  
FOR SOUTHERN DISTRICT OF OHIO

IN RE APPLICATION OF THE UNITED  
STATES OF AMERICA FOR AN ORDER  
AUTHORIZING THE INSTALLATION AND  
USE OF PEN REGISTERS AND TRAP AND  
TRACE DEVICES

Case No. **3 : 16 mj 78**

**Filed Under Seal**

**APPLICATION**

The United States of America, moving by and through Assistant United States Attorney Sheila G. Lafferty, its undersigned counsel, respectfully submits under seal this *ex parte* application for an order pursuant to 18 U.S.C §§ 3122 and 3123, authorizing the installation and use of pen registers and trap and trace devices (“pen-trap devices”) to record, decode, and/or capture dialing, routing, addressing, and signaling information associated with each communication to or from the cell phone number **(585) 219-9021** (the Target Telephone), further described in Attachment A. In support of this application, the United States asserts:

1. This is an application, made under 18 U.S.C. § 3122(a)(1), for an order under 18 U.S.C. § 3123 authorizing the installation and use of a pen register and a trap and trace device.
2. Such an application must include three elements: (1) “the identity of the attorney for the Government or the State law enforcement or investigative officer making the application”; (2) “the identity of the law enforcement agency conducting the investigation”; and (3) “a certification by the applicant that the information likely to be obtained is relevant to an ongoing criminal investigation being conducted by that agency.” 18 U.S.C. § 3122(b).
3. The undersigned applicant is an “attorney for the government” as defined in Rule 1(b)(1) of the Federal Rules of Criminal Procedure.
4. The law enforcement agency conducting the investigation is the Federal Bureau of Investigation (FBI).

FILED  
MICHAEL J. NAGEL  
CLERK OF COURT  
2016 MAR 25 PM 4:08  
U.S. DISTRICT COURT  
SOUTHERN DISTRICT OF OHIO  
CINCINNATI, OHIO

5. The applicant hereby certifies that the information likely to be obtained by the requested pen-trap devices is relevant to an ongoing criminal investigation being conducted by the FBI.

6. This Court is a “court of competent jurisdiction” under 18 U.S.C. § 3122(a)(2) because it “has jurisdiction over the offense being investigated.” 18 U.S.C. § 3127(2)(A)(i).

#### ADDITIONAL INFORMATION

7. Other than the three elements described above, federal law does not require that an application for an order authorizing the installation and use of a pen register and a trap and trace device specify any facts. The following additional information is provided to demonstrate that the order requested falls within this Court’s authority to authorize the installation and use of a pen register or trap and trace device under 18 U.S.C. § 3123(a)(1).

8. A “pen register” is “a device or process which records or decodes dialing, routing, addressing, or signaling information transmitted by an instrument or facility from which a wire or electronic communication is transmitted.” 18 U.S.C. § 3127(3). A “trap and trace device” is “a device or process which captures the incoming electronic or other impulses which identify the originating number or other dialing, routing, addressing, and signaling information reasonably likely to identify the source of a wire or electronic communication.” 18 U.S.C. § 3127(4).

9. In the traditional telephone context, pen registers captured the destination phone numbers of outgoing calls, while trap and trace devices captured the phone numbers of incoming calls. Similar principles apply to other kinds of wire and electronic communications, as described below.

10. The Internet is a global network of computers and other devices. Devices directly connected to the Internet are identified by a unique number called an Internet Protocol, or “IP”

address. This number is used to route information between devices. Generally, when one device requests information from a second device, the requesting device specifies its own IP address so that the responding device knows where to send its response. An IP address is analogous to a telephone number and can be recorded by pen-trap devices, and it indicates the online identity of the communicating device without revealing the communication's content.

11. A network is two or more computers or other devices connected to each other that can exchange information with each other via some transmission method, such as by wires, cables, or radio waves. The equipment that connects a computer or other device to the network is commonly referred to as a network adapter. Most network adapters have a Media Access Control ("MAC") address assigned by the manufacturer of the adapter that is designed to be a unique identifying number. An adapter's unique MAC address allows for proper routing of communications on a local area network and may be used for other purposes, such as authentication of customers by some network service providers. Unlike a device's IP address that often changes each time a device connects to the Internet, a MAC address is fixed at the time of manufacture of the adapter. Because the address does not change and is intended to be unique, a MAC address can allow law enforcement to identify whether communications sent or received at different times are associated with the same adapter.

12. On the Internet, data transferred between devices is not sent as a continuous stream, but rather it is split into discrete packets. Generally, a single communication is sent as a series of packets. When the packets reach their destination, the receiving device reassembles them into the complete communication. Each packet has two parts: a header with routing and control information, and a payload, which generally contains user data. The header contains non-

content information such as the packet's source and destination IP addresses and the packet's size.

13. In addition, different Internet applications are associated with different "port numbers," or numeric identifiers. The port number is transmitted along with any communication using that application. For example, port 80 typically is associated with communications involving the World Wide Web.

14. A cellular telephone, or cell phone, is a mobile device that transmits and receives wire and electronic communications. Individuals using cell phones contract with cellular service providers, who maintain antenna towers covering specific geographic areas. In order to transmit or receive calls and data, a cell phone must send a radio signal to an antenna tower that, in turn, is connected to a cellular service provider's network.

15. In addition to a unique telephone number, each cell phone has one or more unique identifiers embedded inside it. Depending upon the cellular network and the device, the embedded unique identifiers for a cell phone could take several different forms, including an Electronic Serial Number ("ESN"), a Mobile Electronic Identity Number ("MEIN"), a Mobile Identification Number ("MIN"), a Subscriber Identity Module ("SIM"), an International Mobile Subscriber Identifier ("IMSI"), a Mobile Subscriber Integrated Services Digital Network Number ("MSISDN"), or an International Mobile Station Equipment Identity ("IMEI"). When a cell phone connects to a cellular antenna or tower, it reveals its embedded unique identifiers to the cellular antenna or tower, and the cellular antenna or tower records those identifiers as a matter of course. The unique identifiers—as transmitted from a cell phone to a cellular antenna or tower—are like the telephone number of an incoming call. They can be recorded by pen-trap

devices and indicate the identity of the cell phone device making the communication without revealing the communication's content.

16. In addition, a list of incoming and outgoing telephone numbers is generated when a cell phone is used to make or receive calls, or to send or receive text messages (which may include photographs, videos, and other data). These telephone numbers can be recorded by pen trap devices and then used to identify the parties to a communication without revealing the communication's contents.

17. A cell phone can also be used to exchange text messages with email accounts. The email addresses associated with those text messages can be recorded by pen-trap devices and then used to identify parties to a communication without revealing the communication's contents.

18. Cellular phones can connect to the Internet via the cellular network. When connecting through the cellular network, Internet communications sent and received by the cellular phone each contain the same unique identifier that identifies cellular voice communications, such as an ESN, MEIN, MIN, SIM, IMSI, MSISDN, or IMEI. Internet communications from a cellular phone also contain the IP address associated with that cellular phone at the time of the communication. Each of these unique identifiers can be used to identify parties to a communication without revealing the communication's contents.

#### THE RELEVANT FACTS

19. The United States government, including the Dayton Office of the FBI, are investigating a drug trafficking organization. The investigation concerns possible violations of Title 21, United States Code, Sections 841(a)(1) and 846 by CHARLES DARNELL SPENCER, and others known and unknown.

20. This investigation relates to the possession and distribution of illegal controlled substances as well as conspiracy to do the same by the CHARLES DARNELL SPENCER Drug Trafficking Organization. Agents believe that matters relevant to the offenses under investigation have been and continue to be discussed using AT&T Cricket mobile phone number **(585) 219-9021**. AT&T Cricket is an electronic communication service doing business in Buffalo, New York. Agents believe that the listed subscriber for this number is Ahmad Shalash, 888 Main Street, Buffalo, New York 14202 but that the phone is primarily used by CHARLES DARNELL SPENCER.

21. The conduct being investigated involves use of the cell phone number described in Attachment A. To further the investigation, investigators need to obtain the dialing, routing, addressing, and signaling information associated with communications sent to or from that cell phone number.

22. The pen-trap devices sought by this application will record, decode, and/or capture dialing, routing, addressing, and signaling information associated with each communication to or from the cell phone number described in Attachment A, including the date, time, and duration of the communication, and the following, without geographic limit:

- IP addresses associated with the cell phone device or devices used to send or receive electronic communications;
- Any unique identifiers associated with the cell phone device or devices used to make and receive calls with cell phone number described in Attachment A, or to send or receive other electronic communications, including the ESN, MEIN, IMSI, IMEI, SIM, MSISDN, or MIN;

- IP addresses of any websites or other servers to which the cell phone device or devices connected; and
- Source and destination telephone numbers and email addresses.

#### GOVERNMENT REQUESTS

22. For the reasons stated above, the United States requests that the Court enter an Order authorizing the installation and use of pen-trap devices to record, decode, and/or capture the dialing, routing, addressing, and signaling information described above for each communication to or from the cell phone number described in Attachment A, to include the date time, and duration of the communication, without geographic limit. The United States does not request and does not seek to obtain the contents of any communications, as defined in 18 U.S.C. § 2510(8).

23. The United States further requests that the Court authorize the foregoing installation and use for a period of sixty (60) days from the date of the Court's Order, pursuant to 18 U.S.C. § 3123(c)(1).

24. The United States further requests, pursuant to 18 U.S.C. §§ 3123(b)(2) and 3124(a)-(b), that the Court order AT&T, and any other person or entity providing wire or electronic communication service in the United States whose assistance may facilitate execution of this Order to furnish, upon service of the Order, information, facilities, and technical assistance necessary to install the pen-trap devices, including installation and operation of the pen-trap devices unobtrusively and with minimum disruption of normal service. Any entity providing such assistance shall be reasonably compensated by the FBI, pursuant to 18 U.S.C. § 3124(c), for reasonable expenses incurred in providing facilities and assistance in furtherance of this Order.

25. The United States further requests that the Court order AT&T, and any other person or entity whose assistance may facilitate execution of this Order to notify the applicant and the FBI of any changes relating to the cell phone number described in Attachment A, and to provide prior notice to the applicant and the FBI before terminating or changing service to the cell phone number.

26. The United States further requests, pursuant to 18 U.S.C. § 3123(d)(2), that the Court order AT&T, and any other person or entity whose assistance facilitates execution of this Order, and their agents and employees, not to disclose in any manner, directly or indirectly, by any action or inaction, the existence of this application and Order, the resulting pen-trap devices, or this investigation, unless and until authorized by this Court, except that AT&T, may disclose this Order to an attorney for AT&T, for the purpose of receiving legal advice.

27. The United States further requests that this application and any resulting Order be sealed until otherwise ordered by the Court, pursuant to 18 U.S.C. § 3123(d)(1).

28. The United States further requests that the Clerk of the Court provide the United States Attorney's Office with three certified copies of this application and Order, and provide copies of this Order to the FBI and AT&T, upon request.
